Toyota Starts Retail Sales for Improved Zenix HEV

Improved Zenix HEV retail sales started on November 16

Toyota Motor Philippines (TMP) started retail sales of the updated Toyota Zenix 2.0 Q Hybrid Electric Vehicle (HEV) last November 16. The update brings a panoramic moonroof, larger displays, refreshed interior details and added connectivity to its seven-seater hybrid electric multi-purpose vehicle (MPV).

The improved Zenix HEV builds on the continuous demand for the vehicle since its launch in 2023. It features enhancements to its hybrid powertrain and cabin features to meet the needs of buyers seeking a seven-seater family MPV.

The updated model is part of Toyota's wide lineup of electric vehicles consisting of 9 hybrid electric vehicles and 3 battery electric vehicles. This 12-model lineup is the country's widest electric lineup, offering customers a choice of vehicle types and powertrains to suit their mobility needs.

Improved Convenience and Connectivity

A panoramic moonroof is among the key additions to the Zenix HEV which brings more natural light into the cabin and gives occupants a wider view overhead. The cabin also receives revised door trim that combines leather with silver accents and piano black finishes.

The updated Zenix HEV features a 12.3-inch display audio system paired with six speakers. The larger display provides more screen space for compatible navigation, music, smartphone functions. The vehicle also comes standard with wireless Apple CarPlay, Android Auto, Bluetooth, and voice command connectivity. A 12.3-inch multi-

information display also gives the driver a larger viewing area for vehicle information. Together, the upgraded displays improve how driving information and entertainment functions are presented inside the cabin.

The Zenix HEV now comes with increased engine performance

Additionally, the model comes with an improved Data Communication Module with remote functionality through the myToyota Connect app expands the vehicle's connected capabilities.

Updated Hybrid Performance

The updated Zenix HEV has an improved 2.0-litre gasoline engine that delivers 158 PS. Paired with an electric motor the vehicle now has a total system output of 186 PS. The combined system output represents the performance available from the engine and electric motor working together.

These powertrain updates complement the Zenix HEV's seven-seat layout, bringing hybrid electric performance to a vehicle designed to accommodate everyday family transport and longer trips.

Consistent Driver assistance and Visibility

The updated model retains Toyota Safety Sense, which includes a Pre-Collision System, Lane Departure Alert, Lane Tracing Assist, Automatic High Beam and Dynamic Radar Cruise Control. These features aid in monitoring traffic, maintaining lane awareness, managing speed, and following distance.

A Blind Spot Monitor and Rear Cross Traffic Alert add assistance when changing lanes or reversing, while a Panoramic View Monitor helps drivers check the vehicle's surroundings during parking and low-speed maneuvers. Front and rear parking sensors and digital video recorders round out the equipment.
