Experience More Ease & Convenience with Next-Gen myToyota Connect!

From preparing a comfortably cool cabin before getting onboard, checking whether the doors are safely locked, or simply finding where they parked their car are small conveniences which make a big difference for any car owner. Toyota brings these everyday conveniences to eligible All-New Hilux owners through Next-Gen mTC featuring Toyota Remote, with connected features that support vehicle convenience, security, and care.

Enhancing Pre-Drive Convenience Through Connected Technology

Returning to your pickup after an afternoon outdoors? With remote air-conditioning control, eligible All-New Hilux owners can switch the A/C on or off through Toyota Remote to help prepare a comfortable cabin temperature before stepping inside. Whether wrapping up a family outing or preparing for the drive home, owners can start cooling the cabin before returning to their vehicle for a more comfortable journey.

Keep an eye on your Toyota, even after parking

Next-Gen myToyota Connect makes it easier to check on the vehicle once it is parked. Through their phone, owners can view the status of the doors, windows, and lights, helping them spot anything that may need attention. When "Did I lock the car?" comes to mind after settling into a restaurant or arriving at the office, a quick check provides reassurance, while remote locking lets them secure the doors without walking back to the parking area. Owners can also unlock the doors remotely when needed.

Finding the vehicle in a busy parking area is easier with GPS-based Find My Car, while activating the horn or flashing the hazard lights can help owners spot their Toyota when nearby. Geofence alerts notify owners when the vehicle travels outside a designated area, and anti-theft notifications can alert them to unauthorized entry.

In the event of suspected theft, customers can contact support for assistance with stolen vehicle tracking and remote immobilization, subject to applicable service conditions. Immobilization is an assistance-supported feature, not a function for stopping a moving vehicle through the app.

Support when your vehicle needs attention

Through e-Care, vehicle health warnings help owners stay informed when their Toyota may need attention, giving them a prompt to seek advice and address concerns. Whether preparing for the daily commute or heading out on a longer drive, having this information within reach makes it easier to keep vehicle care part of the routine. Access to 24/7 customer assistance also gives owners a way to ask for support, while 24/7 roadside assistance helps them seek help when an unexpected concern or breakdown interrupts a journey.

For customers planning their next stop, the charging and fuel station map helps locate

places to recharge or refuel, depending on vehicle applicability. This can be particularly useful when traveling through an unfamiliar area or preparing for a longer trip, allowing owners to identify possible stops along the route and plan around their vehicle's needs.

Let your driving habits count at insurance renewal

Connected ownership can bring opportunities to save through CTI, a Pay-How-You-Drive insurance offering that considers how a vehicle is driven and how far it travels. Through Connected Toyota Insure (CTI), driving habits and mileage can contribute to potential insurance renewal savings, subject to applicable terms.

The vehicle's built-in connected device monitors mileage and driving behavior, including harsh braking, harsh acceleration and harsh cornering. Driving data is used to calculate a personalized Driving Score. This score, together with mileage, helps determine potential savings at insurance renewal, giving customers a reason to understand the habits behind their everyday journeys.

CTI will soon be available through participating Toyota Insure partners, giving customers an opportunity to earn insurance renewal premium savings based on their driving habits. Customers may qualify for savings up to 25% on the driving-related perils portion of their insurance premium only, based on their Driving Score and mileage over an eight-month driving period, subject to terms and conditions. While actual savings may vary, the maximum is not guaranteed. Customers may consult their preferred Toyota dealership about CTI eligibility and the conditions that apply to their policy.

Discover what is available for your Toyota

Connected services extend to other eligible Toyota models through Basic myToyota Connect, which includes features such as Find My Car, geofence alerts and Trip Recorder, depending on model applicability. Owners of the earlier Hilux models, Corolla Altis, Corolla Cross, Camry, Zenix, Hiace, Fortuner, Alphard, earlier RAV4 models, Land Cruiser Prado, and Land Cruiser can ask their dealership which services their vehicle supports. These basic features are distinct from the Next-Gen mTC and Toyota Remote features highlighted for eligible All-New Hilux customers.

"We want our customers to feel supported long after they drive home their Toyota. Next-Gen mTC featuring Toyota Remote helps eligible All-New Hilux owners prepare for a drive, check on their vehicle, and access assistance through their phone," said Elijah Sue Marcial, Toyota Motor Philippines First Vice President for Vehicle Operations. "We encourage customers to download the myToyota App and Toyota Remote App and consult their preferred Toyota dealership about eligibility and available services."

Get connected, step by step

To get started, download the myToyota App and Toyota Remote App from the App Store or Google Play to access applicable features. Toyota Remote is accessible through myToyota Connect in the myToyota App. Customer registration and log-in information for Toyota Remote is processed through the myToyota App.

For guidance on setting up these services, watch Toyota's step-by-step activation here!

The walkthrough covers downloading the apps, creating a myToyota App account, activating Next-Gen mTC and setting up Toyota Remote. It introduces the features available in Toyota Remote to help customers become familiar with the services they can use.

Whether you already own a Toyota or are considering the All-New Hilux, visit or contact your preferred Toyota dealership to confirm model and variant eligibility, get guidance on activation requirements and subscription terms, and explore the connected services and CTI options available to you.

BYD Supports Broader EV Education Through ACMobility's Safety Program and Owner Communities

BYD owners join an EV Safety Session to learn more about electric vehicle safety and emergency preparedness, building greater confidence on the road.

As more Filipinos explore electric mobility, access to reliable information on EV technology, safety, charging, and ownership costs is becoming increasingly important. Following its launch in August, ACMobility's Drive Electric. EV Safety Program continued its rollout at the Philippine Electric Vehicle Summit (PEVS), helping EV owners, prospective buyers, fleet operators, and the wider public make informed decisions about electric mobility.

For BYD, these efforts complement the support it provides to its growing customer base, including owner communities where drivers can share experiences, learn from one another, and better understand their vehicles.

"We're glad to see BYD owners building communities where they can learn from and support one another. We want to continue celebrating these groups by helping provide access to relevant information, knowledge, and support throughout the ownership journey. At the same time, listening to our owners gives us an opportunity to learn from their experiences and better understand their needs as we work to grow awareness of electrified mobility in the Philippines," said Bob Palanca, Managing Director of BYD Cars Philippines.

As BYD's vehicle lineup expands in the Philippines, so do the communities forming around its different models. From sharing practical ownership advice to joining activities with fellow drivers, these groups give owners a space to exchange experiences, learn more about their vehicles, and help others navigate the shift to electrified mobility.

For many members, the groups began with a simple goal: helping fellow owners. Aaron Estabillo, a BYD Sealion 6 owner and one of the group's moderator team, says the community allows drivers to learn from one another's experiences. "The most common benefit is you get to see everything from everyone's point of view. I learn from other owners the things I may have missed myself," he said.

These exchanges help owners better understand their vehicles, from exploring features to comparing everyday driving experiences and running costs. For prospective buyers, they also offer firsthand perspectives to consider alongside professional reviews and dealership consultations.

Beyond online discussions, members organize camping trips, outreach programs, and vehicle gatherings that build connections beyond a shared interest in cars. Some also get opportunities to engage with BYD representatives and technical experts.

While owners have different needs and driving habits, many are drawn to BYD for its combination of value, practicality, efficiency, and technology. Through their communities, they can continue learning from one another long after bringing their vehicles home.

By combining EV safety education with the firsthand experiences shared within owner communities, ACMobility and BYD contribute to a better-informed EV community. Whether Filipinos are considering their first electric vehicle or already own one, access to reliable information and shared experiences can help them better understand the technology and what ownership entails.

Together, safety education, charging infrastructure, and after-sales support complement the firsthand advice shared within BYD owner communities, helping drivers make more informed decisions and navigate the realities of electrified vehicle ownership.

BYD Sealion 6 DM-i Makes Bestseller Even Better with New Dynamic and Premium Variants

Expanded lineup delivers greater accessibility, enhanced technology, and improved charging capabilities.

The new BYD Sealion 6 DM-i Premium in Delan Black

BYD Cars Philippines expands the BYD Sealion 6 DM-i nameplate with the introduction of two new variants, Dynamic and Premium. Building on the model's success in the compact SUV segment, the new options bring greater accessibility and enhanced features to the market.

Both variants are powered by BYD's Super DM-i technology and an 18.3 kWh BYD Blade Battery, delivering a pure electric range of up to 100 kilometers and a combined range of up to 1,200 kilometers. With a maximum output of 217 PS and 300 Nm of torque, the updated Sealion 6 DM-i continues to offer EV-like driving with the practicality of extended range.

"The BYD Sealion 6 DM-i has established itself as a strong player in its segment, and we are committed to making it even better for Filipino customers. With the introduction of the Dynamic and Premium variants, we are making it more accessible, while enhancing technology, charging convenience, and safety features where they matter most. Our aim is to make choosing a New Energy Vehicle easier for more Filipino drivers and families, " said Bob Palanca, Managing Director of BYD Cars Philippines.

The new BYD Sealion 6 DM-i Dynamic variant serves as the base model for the Sealion 6 DM-i lineup, featuring a 12.8-inch infotainment touchscreen with six speakers, a 360-degree view camera with four rear sensors, leather seats with a six-way power-adjustable driver's seat, basic cruise control, and six airbags. It supports Type 2 AC charging.

For customers seeking enhanced features, the BYD Sealion 6 DM-i Premium variant offers a larger 15.6-inch infotainment touchscreen with a 10-speaker Infinity sound system, a 360-degree view camera with six sensors, and an eight-way power-adjustable driver's seat. It also introduces CCS2 DC fast charging with a maximum charging power of 18 kW, supporting a 30% to 80% charge in approximately 30 minutes. The Premium variant further elevates driver assistance with BYD DiPilot ADAS features, including Emergency Lane Keeping Assist, Rear Collision Warning, Rear Cross Traffic Alert with Brake, Blind Spot Detection, and Door Open Warning.

The new BYD Sealion 6 DM-i Dynamic and Premium will carry official SRPs of Php 1,548,000 and Php 1,798,000, respectively. Both variants will be available in Harbor Gray, Arctic White, and Delan Black exterior colors, with an all-black cabin.

Customers are encouraged to visit BYD Cars Philippines' booth at Auto Focus Multibrand Test Drive Festival, happening from November 12 to 15, to discover the new BYD Sealion 6 DM-i variants and experience them firsthand through a test drive. As an exclusive event offer, customers who make a reservation for any BYD model, except the BYD Shark 6, BYD Atto 2 EV, and the new BYD Sealion 6 DM-i, during the event will enjoy a Php 25,000 discount. This offer is on top of existing regular promotions.
